September 2026

Course Assistant - BI-GY 810X, Bioinformatics Capstone, Biomedical Engineering

Dr. Brathwaite, NYU Tandon School of Engineering

First, I would like to talk about how I approach problems, how I get better at them, and how I work in a team. I accept it when I fall short of understanding something, and I give my best to understand it from people better than me. I have a lot of respect for anyone I can learn from, and I am not ashamed to ask the same question twice if that is what it takes. It works the other way too. When someone is stuck on something I have already worked out, I will sit with them rather than hand over the answer, and I come out of those understanding it better than when I went in. Knowledge seems to be one of the few things that grows when you share it. I think about problems in systems, and I approach them that way. I think that is also what makes me useful explaining something to someone else - I still remember what it is like to not understand it yet.

I was Technical Officer of the AI Society at Arizona State, where I wrote the teaching materials and ran the workshops that introduced machine learning to students with no technical background. I also mentored four freshmen through their first ML project, an emotion detection system reading facial expressions and audio cues. Before that I worked under Prof. R. P. Singh at the University of Delhi on optimizing Gaussian Process classifiers. At MyYogaTeacher I shipped a voice-to-SQL pipeline on Whisper with streaming LLM responses that replaced the admin team's Ctrl+F-and-edit workflow. Lead Engine is a Python pipeline that scores every lead with an LLM and writes the reasoning out next to the score. Torii is an MCP proxy that sits between AI agents and the paid tools they call. I am now a first-year M.S. Computer Science student at NYU.

I can commit [N] hours a week through the semester on whatever schedule the course needs, and I am available [DAYS]. [WORK AUTHORIZATION LINE - see intake.md]. I would be glad to talk about what the course needs.
