September 2026

Graduate Gallery Admin Assistant, Gallatin Galleries

Rachel Plutzer, NYU Gallatin School of Individualized Study

First, I would like to talk about how I approach problems, how I get better at them, and how I work in a team. I accept it when I fall short of understanding something, and I give my best to understand it from people better than me. I have a lot of respect for anyone I can learn from, and I am not ashamed to ask the same question twice if that is what it takes. It works the other way too. When someone is stuck on something I have already worked out, I will sit with them rather than hand over the answer, and I come out of those understanding it better than when I went in. Knowledge seems to be one of the few things that grows when you share it. I think about problems in systems, and I approach them that way. I think that is also what makes me useful explaining something to someone else - I still remember what it is like to not understand it yet.

I would encourage you to visit my portfolio at www.asmit.space.

I build things for the screen, and the reason this posting stopped me is that it is about a room. My portfolio is my own room, modeled in Blender and put in the browser with Three.js - you walk up to the desk, click the machine, and every project opens as its own artifact instead of a list of links. Pash splits songs into vocals, drums, bass and instrumentals. The season I would be working is the run-out of The Best of All Possible Worlds and the whole of Stacy Kranitz's show, from October 30 to December 15, install to de-install. That is the part I want: the dates, the deliveries, the list of works, and the people who each own a piece of it.

What I can point to is smaller than a gallery season, and I would rather say so. At the AI Society at Arizona State I wrote the materials for and ran workshops and study sessions for students of all majors. I also mentored four freshmen through their first machine learning project, which meant people and dates and a room to keep in order. At MyYogaTeacher I was given the initial design of a new feature and turned the idea into diagrams, wireframes and user journeys for the development team, then built against my own drawings. At WatchDNA I built the admin console for data operations and a store locator, and hooked up alerts so anything that broke was seen and fixed right away. I have not used Asana. I looked it up before writing this. A board of tasks with owners and dates is close to how I already keep track of work - Lead Engine's dashboard shows every scout and every call while it runs, so nothing goes missing quietly.

I can commit the twenty hours a week the posting describes. My classes are on Tuesday and Wednesday evenings and Friday late morning, so I am free on-site most weekdays during gallery hours and on Monday and Thursday evenings for openings. I am on an F-1 visa, which permits on-campus employment without further authorization. I would be glad to come by the galleries to talk about what the season needs.
