

ASMIT DATTA

New York, NY · asmit77@icloud.com · asmit.space · linkedin.com/in/asmitrajeet · github.com/sm11t

EDUCATION

New York University <i>M.S. in Computer Science</i>	New York, NY Expected 2028
Arizona State University <i>B.S. in Computer Science, Minor in Business</i>	Tempe, AZ May 2026

EXPERIENCE

Research Study Assistant <i>University of Delhi</i>	May 2024 – Aug 2024 New Delhi, India
Worked under Prof. R. P. Singh on optimizing Gaussian Process classifiers for high-dimensional data	
Technical Officer <i>The AI Society at ASU</i>	Aug 2025 – Jan 2026 Tempe, AZ
- Mentored four freshmen through their first ML project, an emotion detection system reading facial expressions and audio cues - Ran workshops and study sessions that made machine learning approachable to students with no technical background, and wrote the materials for them	
Software Engineer Intern <i>MyYogaTeacher</i>	May 2025 – Jan 2026 San Diego, CA (Remote)
- Turned a high-level feature idea into diagrams, wireframes and user journeys for the development team, then built against them - Shipped a voice-to-SQL pipeline on Whisper with streaming LLM responses that replaced the admin team's Ctrl+F-and-edit workflow - Wrote the React Native client that streams biometric data in real time, with offline-first sync and time-series deduplication so nothing is lost when the network drops	
Software Engineer Intern (Capstone) <i>WatchDNA</i>	Aug 2025 – Apr 2026 Ontario, Canada (Remote)
- Built WatchDNA's store locator: an interactive Mapbox map with real-time filtering, an admin console for data operations, and a Python pipeline that discovers retailer endpoints on its own - Set up the backend from scratch on Node.js - the database schema, the REST endpoints, JWT authentication with role-based access, and the security middleware around it - Shipped a companion app on the same infrastructure, reusing the auth, security, and data layers	

PROJECTS

Torii <i>asmit.space/ky</i>	2026 TypeScript, Bun, Hono, SQLite
- Put an MCP proxy between AI agents and the paid tools they call, enforcing identity, policy and budget on every request: JWT agent identity, a JSON policy engine, and a SQLite ledger recording every call and every reason one was blocked - Handled the x402 payment flow end to end - intercept the HTTP 402, check the wallet, pay, retry - with a budget tracker that reserves funds before the upstream call so two agents cannot overspend at once; the whole thing ships on two production dependencies	
Lead Engine <i>asmit.space/lead-engine</i>	2026 Python, FastAPI, React, SQLAlchemy
- Kept five scout agents running constantly across Zillow, Redfin, FSBO, expired listings and the Maricopa County Assessor, deduplicating by address and scoring every lead on motivation, ability and timeline with the reasoning written out - 2,129 leads sourced - Built the dashboard over it as a live pipeline graph, so every scout, score and call is visible while it runs and a failed scout shows up the moment it fails	
Pash <i>lnkd.in/p/dCwX6kYm</i>	2026 AWS S3/SQS, Demucs v4, CUDA
Split songs into vocals, drums, bass and instrumentals with Demucs v4 - uploads land in S3, jobs queue through SQS, and separation runs on a remote CUDA worker, 5-10x faster than on CPU	
Portfolio <i>asmit.space</i>	Three.js, Blender, React
Modeled my own room in Blender and put it in the browser with Three.js - you walk up to the desk, click the machine, and every project opens as its own artifact instead of a list of links	

SKILLS

Languages: Python, SQL, TypeScript, JavaScript, HTML/CSS	
AI & Agents: Gaussian Processes, Autonomous agents, OpenAI API, Claude API, Prompt engineering, Whisper, spaCy, MCP, Demucs, x402	
Data & Cloud: PostgreSQL, SQLite, AWS, CUDA, Supabase, MongoDB, Firebase, Docker, CI/CD, Git	
Backend & APIs: FastAPI, REST, Node.js, Express.js, Flask, Bun, Hono, GraphQL, WebSocket, JWT, Role-based access control, SQLAlchemy	
Frontend & Mobile: React, Three.js, Blender, React Native, Expo, Tailwind, NativeWind, Material-UI, Vite, Recharts, Electron, Figma, Mapbox
