September 2026

Department Assistant, Finance Department

Christina Borovilas, NYU Stern School of Business

First, I would like to talk about how I approach problems, how I get better at them, and how I work in a team. I accept it when I fall short of understanding something, and I give my best to understand it from people better than me. I have a lot of respect for anyone I can learn from, and I am not ashamed to ask the same question twice if that is what it takes. It works the other way too. When someone is stuck on something I have already worked out, I will sit with them rather than hand over the answer, and I come out of those understanding it better than when I went in. Knowledge seems to be one of the few things that grows when you share it. I think about problems in systems, and I approach them that way. I think that is also what makes me useful explaining something to someone else - I still remember what it is like to not understand it yet.

I am a first-year M.S. Computer Science student at NYU. The closest thing on my resume to this job is Flickmatch, where I revamped the website end to end, turning the new Figma designs into responsive React and Material-UI components across every page. I built and keep up my own site, asmit.space, in HTML/CSS, React and Three.js. At WatchDNA I built the admin console the store locator's data is updated through. As Technical Officer of the AI Society at Arizona State I wrote the materials for and ran workshops that introduced machine learning to students with no technical background.

I can commit [N] hours a week through the semester, and I am available [DAYS]. [WORK AUTHORIZATION LINE - see intake.md]. I would be glad to come by the department to talk about what the role needs.
